

**Status Report
Control Measure Evaluations
(Stationary and Mobile Sources)**

October 16, 2003

District staff continue to evaluate the wide range of suggested control measures for stationary and mobile sources. MTC staff are evaluating transportation control measure suggestions. Approximately 350 stationary and mobile source measures have been compiled from the following sources:

- Ozone Working Group (OWG)
- Community meetings
- Other air districts' regulations, control measures, and suggestions
- District Board members and Advisory Council
- Members of the public
- Previous Bay Area air quality plans
- District staff

As staff evaluate the measures, we are taking into consideration comments we heard at the August OWG meeting and at several of the community meetings, particularly regarding local health benefits and the need to pursue legislation or funding where it is currently lacking.

To date, staff have conducted a preliminary review of over half of the measures. The current breakdown of the control measure evaluation process is as follows:

	<u># of measures</u>
Already implemented	18
Potentially viable measures	12
Further study needed	7
State or Federal Jurisdiction	67
Need funding	28
Need legislative authority	3
Negligible emission reductions	37
Not technically feasible	8
Not cost-effective	8
Under evaluation	162
TOTAL	350

For the October 28, 2003 OWG meeting, a substantial part of the meeting will focus on discussing the suggested measures, particularly issues, concerns and interests raised by the participants. Please refer to the tables of suggested measures provided for the August 5, 2003 Ozone Working Group meeting, available on the District website at <http://www.baaqmd.gov/pln/Plans/ozone/2003/workgroup/ozoneworkgrp.asp>.

For the January 6, 2004 Ozone Working Group meeting, we expect to have completed preliminary evaluations of all of the suggested measures, and we expect to provide a complete draft of the evaluations for review and discussion.
